

## CABLE SOLUTION

New at METZGER:

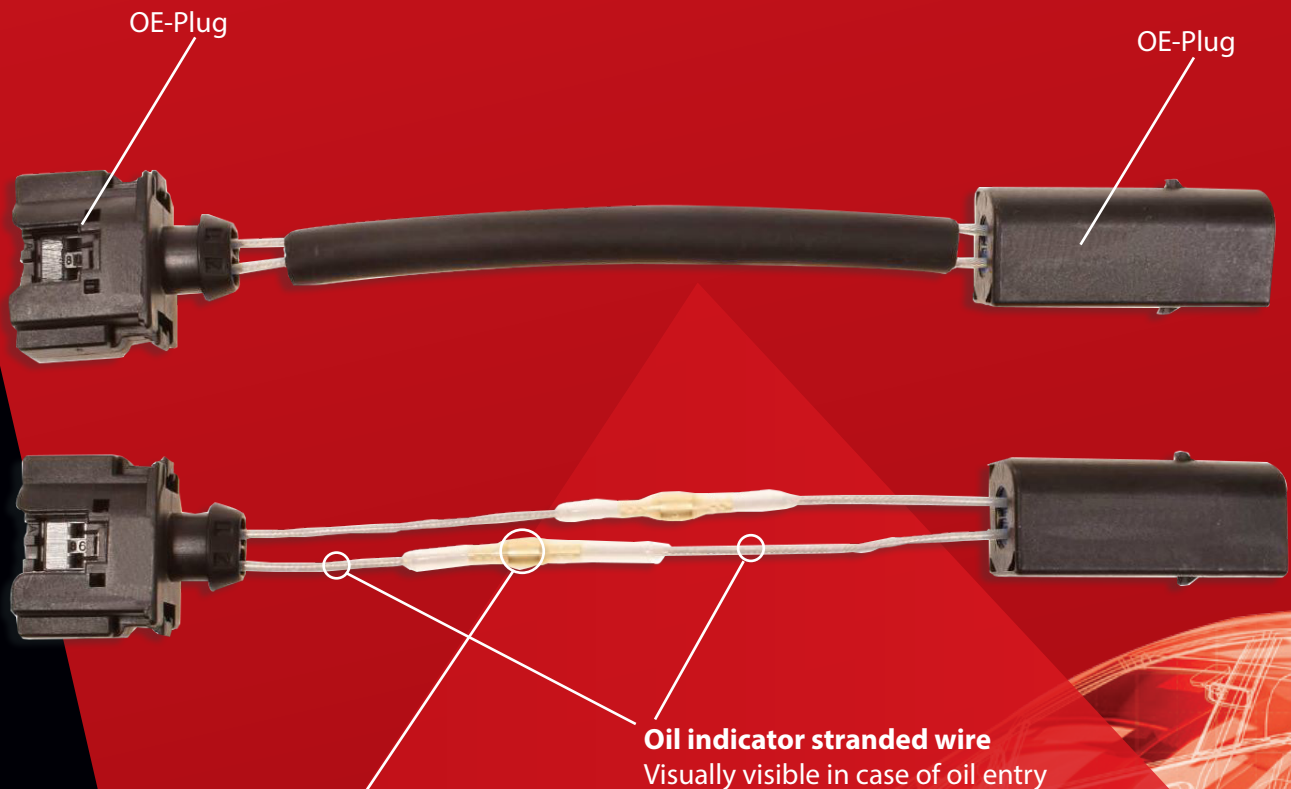

Oil stop cable for connecting lead camshaft adjuster  
Mercedes Benz: A 271 150 27 33

### Innovation:

Oil stop line connector  
Oil indicator stranded wire

„Improved  
Version“

The loss of oil at the camshaft adjuster is a known problem with certain Mercedes-Benz engines. Due to the capillary effect, the oil in the wiring harness can reach the control unit. This can lead to failure of the electronics. The Metzger's „oil stop cable“ effectively prevents oil from penetrating the wiring harness.

#### Oil stop line connector

- Corrosion-free
- Connection technology according to
  - Standard DIN EN 60352-2
  - VW Norm Group Standard VW 60330

**Oil indicator stranded wire**  
Visually visible in case of oil entry

**Part number 2324048**
