

NEW: COOLANT HOSES

metzger 
Autoteile

The coolant hose is an important part of the cooling circuit of all vehicles with water-cooled engine.

With the help of a water pump the coolant fluid is pumped through the cooling hoses, keeping the engine at an optimum operating temperature.

Coolant hoses can become porous and cracked over time due to their material and constant use. However, environmental influences or a marten bite can also lead to a leaking coolant hose.

- **is now available in the Metzger range with more than 750 items**
- **tested safety and quality**
- **immediately available**

Leakage must be dealt as quickly as possible, as loss of coolant can lead to a major engine damage in the worst case and leaking coolant can posing a threat in the road traffic.
